

Ray Rashed

Senior Software Engineer | Full-Stack | Database Administration | CI/CD

(405) 476-0465 | rashed.al1997@gmail.com | www.rashedalrashed.com

PROFESSIONAL SUMMARY

Senior full-stack engineer with 9+ years of experience designing and delivering production-grade web, mobile, API, and Database Administration. Eliminating critical performance bottlenecks, building autonomous CI/CD systems, and deploying privacy-focused AI infrastructure that keeps sensitive data fully on-premise. Equally comfortable owning an entire feature independently or contributing deeply within a collaborative engineering team.

TECHNICAL SKILLS

Backend: C#/.NET, Java, Python, Go, SQL, C++

Frontend/Mobile: React, Angular, Flutter/Dart, React Native, TypeScript, JavaScript, HTML, CSS/SCSS

AI & Infrastructure: Private LLM deployment, llama.cpp, OpenAI protocol, Docker

Cloud & DevOps: Azure DevOps, Google Cloud, Firebase, CI/CD pipelines, Git, Linux

EXPERIENCE

Software Engineer | *Digital Owl Ware* | Oklahoma City, OK Mar 2025 – Present

- Designed and deployed a private on-premise AI system containerized with Docker, building a flexible API layer supporting both private and commercial AI models following OpenAI protocol
- Architected reusable software templates (API, web, mobile) ensuring quality, scalability, and maintainability across client engagements
- Delivered client-facing mobile, web, and cloud solutions including NoSQL database refactoring and performance optimization
- Containerized application services using Docker and Dockerfiles, integrating container builds directly into CI/CD pipelines to enable consistent, environment-agnostic deployment
- Implemented TypeScript unit testing using Vitest across web application codebases, establishing test coverage standards and integrating automated test execution into CI/CD pipeline gates to catch regressions before deployment
- Built unit test suites in Vitest for TypeScript frontend applications, improving code reliability and enabling confident refactoring across component and service layers
- Developed server-side rendered web applications using Next.js, leveraging its hybrid static and dynamic rendering capabilities for improved performance and SEO

Software Engineer | *Oklahoma Blood Institute* | Oklahoma City, OK May 2022 – Feb 2025

- Eliminated database performance bottlenecks through indexing redesign, reducing query execution from consistent timeouts to near- instant response
- Led full-stack development of BioLinked enterprise platform integrating React Native, Angular, and C# APIs, serving research staff across multiple organization
- Designed and automated CI/CD pipelines in Azure DevOps, accelerating deployment cycles and catching critical regressions earlier
- Built a secure multi-tenant file storage system on Azure Blob Storage supporting chunked uploads, type-aware previews with photo thumbnailing, and organization-level access isolation for research documents and other files
- Architected real-time notification systems in React Native and Angular, streamlining alerts with sub-second responsiveness
- Implemented TypeScript-based unit testing framework, improving error detection rates and overall software reliability
- Implemented Continuous Deployments to multiple service in Azure DevOps
- Managed and maintained multiple MS SQL databases
- Developed and maintained enterprise C# .NET Web APIs across both modern .NET and legacy .NET Framework codebases, including environments requiring Windows-specific hosting due to framework constraints
- Worked extensively with Entity Framework for data access layer implementation, managing database migrations, model relationships, and query optimization across SQL Server databases
- Developed authentication workflows using web cookies for session management, maintaining user state securely across multiple web portal applications and C#/.NET backend APIs
- Managed multiple SQL Server databases across staging, demo, and production environments, each populated with environment-specific mock data to ensure safe non-production testing
- Maintained Git version control across multiple repositories using feature branching workflows, conducting pull request reviews and enforcing code quality standards across the engineering team

Junior Consultant / Front-End Developer | *Rural Sourcing Inc.* | Oklahoma City, OK Jan 2022 – May 2022

- Built production web applications using ReactJS and Ant Design with UI/UX design in Figma
- Collaborated in Agile teams delivering search functionality improvements, bug fixes, and performance enhancements via RESTful APIs
- Developed full-stack features across a ReactJS frontend and Java Spring Boot backend, consuming and contributing to RESTful API endpoints connecting frontend interfaces to backend services
- Built and designed a user management portal using ReactJS and Ant Design, owning the full frontend implementation from Figma design through production delivery
- Developed user search functionality with filtering and results handling, integrating directly with backend Java Spring Boot APIs
- Participated in full Agile Scrum ceremonies including daily standups, backlog grooming, sprint planning, retrospectives, and stakeholder meetings as part of a cross-functional delivery team
- Collaborated with designers, backend engineers, and stakeholders to translate business requirements into frontend implementations, contributing to sprint goals and delivery commitments
- Utilized RESTful API patterns to connect Angular and ReactJS frontends to backend services, handling authentication flows and data presentation across user-facing interfaces

Software Engineer Intern | *Novaware Inc.* | Oklahoma City, OK May 2021 – Jan 2022

- Contributed to full development cycle in Agile environment, ensuring data compatibility between sources and application APIs
- Built and deployed client-facing web applications using JavaScript, Firebase, and Bootstrap, contributing across the full development lifecycle in an Agile environment
- Integrated Google Maps API to deliver location-aware features within production web applications, handling map rendering, markers, and geographic data display
- Implemented Firebase Authentication for user management, and built on Firebase Firestore, Realtime Database, and Firebase Hosting across multiple application features
- Developed and maintained landing page experiences, owning frontend implementation and ensuring cross-browser compatibility and responsive design
- Performed data collection, cleanup, and compatibility validation between external data sources and application APIs, ensuring data integrity across Firebase and GCP services
- Deployed applications using Google Cloud CLI and Firebase Hosting, contributing to release processes and environment configuration in a team Agile environment

Computer Science Research Assistant | *University of Central Oklahoma* | Edmond, OK Jan 2017 – Aug 2020

- Designed and developed original Python programming curriculum from scratch for educational research initiatives, owning full instructional design, content creation, delivery, and iteration
- Created and delivered hands-on Robotics curriculum using Raspberry Pi platforms, covering hardware interfacing, multi-threading, real-time control, and sensor integration
- Taught and supervised students across college and high school summer programs, adapting technical curriculum delivery for varied age groups and experience levels
- Mentored and guided students through complex programming and robotics concepts, providing one-on-one support and group instruction
- Conducted survey-based educational research using SPSS, collecting and analyzing data from student lessons and presenting findings at national conferences

EDUCATION

Trine University Angola, IN
Masters of Science in Engineering Management Completed 2026

University of Central Oklahoma Edmond, OK
Bachelor of Science in Computer Science Completed 2020
